## MODEL: VPRD

This is used to maintain the inside pressure of a cleanroom.

In cleanrooms and bio-cleanrooms, positive pressure is necessary to prevent intrusion of contaminated air. On the other hand, if the internal pressure is too high it causes problems opening or closing the doors.

The VICFIL VPRD Type Positive Pressure Damper (Pressure relief damper) allows accurate control of the internal pressure in the cleanroom to a constant positive pressure. The pressure can easily be adjusted by adjusting the position of the weight on the damper blade.
